

George Michalakis

Backend / Platform / Cloud Engineer

georgios.michalakis26@gmail.com | [+33 7 87 25 06 09](tel:+33787250609)

Professional Summary

Backend, platform, and cloud engineer with 6+ years of experience across airline, telecom, and research environments. I build Java and Python services and work with CI/CD, infrastructure as code, Kubernetes/OpenShift, Azure, observability, and AI-assisted developer workflows.

Professional Experience

Amadeus Jun 2022 – Present

Software Engineer / DevOps | Villeneuve-Loubet, France

- **Data Exchange Platform (current):** Build Java features and product integrations on the Eclipse Dataspace Components (EDC) Connector.
- Deliver infrastructure and releases with GitHub, Terraform, Helm, Azure PostgreSQL, and API Management; support adjacent Vue, Angular, and Express work.
- Designed a reusable AI-assisted Spring-to-Quarkus migration harness: Claude Sonnet 5 supported execution while developers supplied context, reviewed validation and environment gates, and approved migration of multiple Spring microservices.
- **Fast Data Platform (first 2 to 3 years):** Built and operated a high-throughput airline data platform serving Amadeus airline customers through Spring Boot and Quarkus microservices.
- Held operational responsibility for 100+ OpenShift namespaces, including Grafana/Prometheus monitoring, alerting, Argo CD, and incident response.
- Owned Java CI and platform Groovy pipelines, Helm configuration, namespace repositories, and umbrella charts. Built Python tools for pull-request checks, migrations, Jenkins, and webhooks; helped improve deployment efficiency by 40% and move delivery to Argo CD.

Netcompany – INTRASOFT International Apr 2020 – Jun 2022

Software Integration Engineer | Patras, Greece

- Developed and integrated Java services for Vodafone and OTE on Oracle Fusion Middleware.
- Delivered SOAP and REST integrations using XML, XSLT, and JDeveloper, contributing to zero-defect production releases.
- Provided 24/7 production support, diagnosing incidents and restoring services within agreed SLAs.

Visualization & Virtual Reality Group, University of Patras Dec 2019 – Jun 2022

Software / VR-AR Engineer | Patras, Greece

- Developed a Unity and C# vehicle simulation with haptic feedback for the EU-funded Trustonomy project.
- Built HoloLens 2 augmented-reality rendering for CPSOS and REST integrations for AGEING@WORK.
- Reached the IEEE VR 3DUI Contest finals in three consecutive years (2020–2022).

Education

University of Patras Oct 2013 – Feb 2020

Diploma in Electrical and Computer Engineering (Integrated BSc/MSc)

Thesis: [Brain–Computer Interface for movement-support devices](#).

Focus: Software engineering, VR/AR, and automation control.

Technical Skills

Backend & automation	Java, Spring Boot, Quarkus, Python, Groovy, Bash, C#, REST, SOAP, AI agent workflows, AI agent harnesses
Platform & cloud	Azure, Kubernetes, OpenShift, Docker, Helm, Terraform, Argo CD, Azure API Management
Delivery & operations	GitHub Copilot agents, GitHub Actions, Jenkins, Bitbucket, CI/CD, Git, Grafana, Prometheus
Data & integration	PostgreSQL, Eclipse Dataspace Components, Oracle Fusion Middleware, XML, XSLT
Web exposure	Vue, Angular, Express
VR/AR	Unity, HoloLens 2, Blender, OpenGL
Languages	Greek (native), English (C2), German (B1), French (B2)
